SUMMARY

Computer Science undergraduate with a specialization in Artificial Intelligence (AI) and Machine Learning (ML). Proficient in Python, Java, and C, with a strong foundation in Data Structures, Algorithms, and software development. Possesses hands-on project experience in developing AI-driven systems, including NLP chatbots, real-time detection, and security classifiers. Eager to secure a role as a Software Engineer or Machine Learning Engineer.

EDUCATION

UPES, Dehradun **CGPA: 7.0**

B.Tech - Computer Science and Engineering (AIML)

RELEVANT COURSEWORK

Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks, Machine Learning, Deep Learning, Cyber Security

SKILLS

Programming Languages:C, Java, Python
Web Development: HTML, CSS, JavaScript, React.js, Node.js, Express.js
Databases: SQL, MongoDB
AI/ML: TensorFlow, Keras, Scikit-learn, PyTorch, OpenCV, NLTK, Pandas, NumPy
Frameworks & Tools: Flask, Django, Streamlit, Google Vertex AI, VS Code, PyCharm, IntelliJ
Languages known: English,Hindi,Japanese(Basic)

EXPERIENCE

IBM **June 2025 - July 2025**

Role - Project Intern *Remote*

- Developed phishing detection system using Random Forest, XGBoost, and Python on the PhishUCIL dataset, under IBM mentorship.
- Engineered feature extraction pipeline with 30+ URL, SSL, and domain features, achieving 97% accuracy in real-time phishing classification.
- Deployed a Flask-based web app with SSL validation and caching, reducing prediction latency by 40% and enhancing end-user experience.

Aatmanirbhar NGO **June 2023 – July 2023**

Role – Social Intern *Jaipur, Rajasthan*

- Designed and delivered educational workshops with fellow volunteers, demonstrating teamwork, communication.
- Prepared educational materials that improved session clarity, leading to a 30% increase in participant interaction.

PROJECTS

Eye on Drive: AI-Powered Driver Alert System | OpenCV, Java | GitHub

- Attained 96% detection accuracy across 1,200+ test frames using OpenCV and Haar cascade classifiers, improving driver safety in simulated environments.
- Integrated a Java-based backend with Python AI modules via REST API, ensuring consistent real-time performance with under 1.5s latency.

Truthlens: Fake news detection | NLP, Python| GitHub

- Developed a Fake News Detection system using machine learning and NLP techniques, achieving 98% classification accuracy on real-world news datasets.
- Deployed the trained model through a Flask-based web application enabling real-time news verification with efficient preprocessing and prediction pipeline.

CERTIFICATIONS

- GenAI Data Analytics Certification(2025): Focused on predictive modeling and ethical AI systems.(Link)
- Google Vertex AI – Training (2023): Learned scalable ML deployment on GCP. (Link)
